Glossary

Carbon

Substance found in all living in things and in the gas carbon dioxide

Decomposition

Process of living things breaking down into their chemical building blocks after death

Fertile

Suitable for things to grow

Fungi

Group of living things separate to plants, animals and bacteria.

Insect

Small creature with six legs and a body with three parts

Invertebrate

Animal without a backbone

Leaf

Part of a plant that turns nutrients, carbon dioxide and oxygen into food for the plant

Microbe

Another name for microorganism. Tiny living thing that can usually only be seen with a microscope.

Mineral

Natural material that can be found in rocks

Nutrient

Substance that a living thing needs to grow

Organic

Living or once living, and containing carbon

Organism

Living thing, such as a microbe, plant or animal

Root

Part of a plant that takes in nutrients and water

Sediment

Bits that settle at the bottom of a body of water, such as a lake

Topsoil

Top layer of soil
